ULTRA
VERNIS
SILICIUM-UREA

Réf. 918U 02/20

STRENGTHENING-PROTECTIVE-ANTIUVA/UVB
MAKE-UP FOR EVEN THE MOST FRAGILE NAILS*

*Recommended for combatting the side effects of cancer treatments on nails

YOUR NAILS

Your nails reflect the state of your health through their colour and various changes.

Fragile, they suffer from many daily aggressions (sudden temperature changes, detergents, bumps, UVA, UVB, etc.), which is why it is important to take care of them and use special products that can protect and strengthen them.

Nails grow an average of 0.1mm per day on your hands and 0.05mm a day on your feet. On average, the nail is fully formed at between 3 and 6 months and they often grow faster in summer than in winter.

They are comprised of layers of keratin (like hair) which makes them both flexible and hard.

Nails are formed in the matrix and harden through the process of keratinization. Nails often reflect the state of our health, our nutrition and encourage us to pay attention to any dietary regimes.

THE NAIL'S MAIN ENEMIES ARE:

- > Humidity,
- > Detergent or caustic products,
- > Extreme temperatures,
- > Fungal infections,
- > Onychophagy (biting your nails),
- > Certain cancer treatments.

RECOMMENDATIONS FOR STRONG NAILS:

- > For hazardous work, housework or gardening, wear gloves.
- > Every time you wash your hands, dry them well afterwards.
- > Keep the nail and the surrounding area moisturised morning and night using the Strengthening Oil for nails and cuticles.
- > Apply the Growth Activator Nail Care to speed up or restart nail growth.
- > Eat a balanced diet.
- > Avoid overly-aggressive nail polish removers, use an acetone-free nail polish remover.

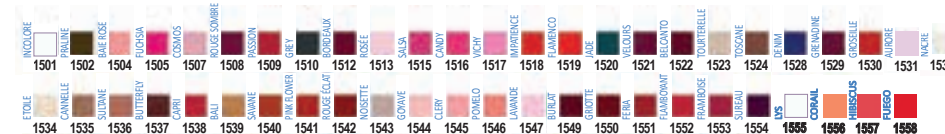

THE ULTRA VERNIS SILICIUM-UREA RANGE

49 colours, rich in **bioavailable organic Silicium** and **Urea** to strengthen and protect your nails and combat dryness, particularly for nails weakened by treatments.

UVA/UVB Protection for all shades (except incolore).

High tolerance formula, without chemical filters or benzophenone.
Free from formalin, formaldehyde resin, toluene, rosin, nickel, parabens, fragrance.

INSTRUCTIONS FOR USE

**For a maximum protective effect
especially with treatments that weaken your nails**

- 1 - Before applying nail polish, remove any old nail polish using an acetone-free nail polish remover and ensure they are perfectly clean and dry.
- 2 - Apply Protective Base Coat enriched with Silicium and trace elements or Ultra Vernis Incolore.
- 3 - Then apply 2 coats of coloured Ultra Vernis (the shade 'Etoile' is discrete, natural and invisible and along with the Top Coat Silicium in Matt is particularly suitable for men).
- 4 - Next apply a coat of Top Coat Gel+ or Ultra Vernis incolore to set the colour.
- 5 - You can make minor retouches as you need, but it is recommended that you remove all the nail polish and repeat the procedure once the polish begins to flake off.
- 6 - In the case of chemotherapy or radiotherapy, ideally, you should begin the procedure 8 to 15 days prior to the first session and carry on 3 months after the last treatment. Repeat the procedure every week.
