

#### STRENGTHENING OIL FOR NAILS AND CUTICLES

This oil-based composition for nails and cuticles is nourishing and restructuring. It restores suppleness to the cuticles and softens and nourishes the nail.

The oily composition is a blend of Apricot kernels, Castor Oil and Macadamia combined with anti-oxidant vitamin E and silicium, which protects and strengthens. Réf. 0807

#### EMOLLIENT GEL FOR DAMAGED CUTICLES

The formulation of this gel softens the cuticles thanks to its adjusted pH in particular, and allows them to be pushed back more easily to enhance the nail contour.

This formulation is completed by soothing allantoin and regenerating silicium. Réf. 0808

#### NOURISHING CREAM FOR NAILS AND CUTICLES

This peach-scented cream is formulated to moisturize and nourish the nail and cuticle. It promotes nail growth, leaving nails more supple and less brittle. The cuticles are moisturized with a more clearly defined nail contour.

This cream is a rich formulation comprising ceramide, Shea butter, silicium, vitamin E and calcium, which bestow all of their beneficial properties on the nails and cuticles. Réf. 0809

## HIGH TOLERANCE COMPLETE RANGE FOR THE NAIL CARE

Toluene-free - Camphor-free – Formol-free - Colophane-free - Formaldehyde resin-free - Phtalate-free

### PROTECTIVE BASE COAT

Applying a make-up base to the nail before applying your favourite nail enamel ensures better, easier application and a longer lasting finish. This is the concept behind the high-tolerance protective base coat from Eye Care Cosmetics. It is also enriched with silicium and sulphur, calcium, iron and zinc trace elements to strengthen the nails. It smooths the surface of the nail and leaves a protective film over the nail, which prevents yellowing/ discolouration of the nails associated with the pigments contained in some coloured enamels. Réf. 802

### HARDENING TREATMENT NAIL CARE

Creates a genuine shield to protect soft, brittle or split nails. It has a dual effect combining mechanical action thanks to a specific resin that forms a hardening but flexible film, and biological action via silicium and sulphur, which strengthen the Keratin network, combined with Iron and Calcium which exert strengthening, hardening properties. This formulation makes the nails stronger and more resistant. Réf. 805

### SMOOTHING STRENGTHENER NAIL CARE

Formulated to smooth and strengthen ridged nails. The smoothing effect is obtained thanks to the Mica-Titanium complex, which evens up the surface. The strengthening properties are due to a combination of Vitamin B5, Silicium, Vitamin E, Sulphur and a blend of Iron/Calcium. Réf. 806

### ANTI-SPLITTING NAIL CARE

This enamel prevents nails from splitting whilst keeping them supple and strong thanks to its formulation containing silicium in particular, helping to promote cohesion between the layers of keratin fibres which also protects against external aggression and envelops the nail by tightening the fibre layers. Réf. 804

### YELLOW NAIL WHITENER

Nails can turn yellow due to different causes: smoking, some coloured enamels, age and disease, etc. This unsightly, yellow appearance needs to be concealed and corrected for aesthetic reasons.

Yellow Nail Whitener instantly corrects yellow nails. Day after day, this treatment smooths the nail surface, helping to restore its natural radiance. This high-tolerance enamel also promotes nail growth and strengthens the nails thanks to silicium and the sulphur, calcium, iron and zinc trace elements it contains. The product can be used alone or as a base coat under coloured nail enamel. Réf. 801

### GROWTH ACTIVATOR NAIL CARE

A carefully formulated treatment for nails when growth is slowed down or stopped altogether by various factors (genetic, medical treatments, nail biting, etc.). Its action is due to a combination of T.D.C., which actively boosts energy in an attempt to promote nail growth with cystine, silicium and calcium. Clinical results confirm average growth (+ 26%) after 30 days of treatment, with a smoother surface finish and less brittle nails. Important: this aqueous solution must be applied at the root of the nail and massaged in with circular movements until the product has been completely absorbed. Réf. 803

### BITTER-TASTE NAIL ENAMEL

This enamel curbs any desire to bite your nails because of its unpleasant, bitter taste. It thus promotes the growth of healthy nails. It can be applied in one or two coats to clean bare nails or polished nails. Réf. 810

### EXPRESS DRY NAIL ENAMEL

For those in a hurry, this express drying formulation cuts drying time by 50% for 2 coats of varnish and even more for a single coat – just apply one drop to each nail. Réf. 811
